Re-imagining Healthcare IT Solutions

Helping Hospitals Improve Patient Outcomes and Increase Margins

As hospitals pursue their mission of delivering world-class patient care, they are accelerating their investment in healthcare technology.

Research from Zebra Technologies indicates “95% of IT decision-makers expect to increase spending in healthcare IT and clinical mobility in the next year.”¹ And while the industry pivots to expand its technology ecosystem, it’s also creating critical business decisions that need to be made – from needs assessment, planning, and due diligence to budgeting, procurement, and installation – to justify their investment.

Are you and your team prepared to take on the added burden of growing your technology infrastructure when market-savvy advice, counsel, and expertise are readily available?

We are a top-ranked KLAS healthcare solutions provider and a trusted advisor to the industry that’s been deployed in one out of three American hospitals. We work closely with leading healthcare systems like yours to provide top-tier patient care and improve patient outcomes while freeing up your clinical staff to focus on their core responsibilities.

Futura offers the critical thinking, resources, and practical tools needed to transition your hospital into the next phase of healthcare delivery – from expertise in program management to process improvement to healthcare IT strategy. We combine experience and knowledge with advanced digital tools to help your organization reach its full potential. Ensure the success of your next IT-related project with the following services:

Project Management: Your initiatives will be managed and worked on by experienced consultants and technicians with proficiency in, but not limited to:

- Clinical and related systems
- Financial systems
- ERP systems
- Telehealth and mobility technologies

Program Management: Using PMI methodologies, our project managers can tailor and adapt our services to fit your simple or sophisticated needs using:

- Standard templates
- Structured project management disciplines
- Risk mitigation strategies
- Quality control

Many healthcare leaders now see technology as essential to improving operational efficiencies, reducing clinical burnout and developing an enhanced standard of care in the long term.²

Let Us Help Manage Your Growing Technology Infrastructure

Process Improvement: We utilize a combined Lean/ Six Sigma and Change Management approach to help increase organizational value, and improve quality, safety, and productivity.

Electronic Health Records: Our EHR implementation and consulting service teams will work with your staff to design and execute customized project plans that meet your timelines, software dependencies, hardware and network prerequisites, workflows, and operational goals. Our services support leading enterprise solutions, including Cerner, Epic, Allscripts, MEDITECH, SAP, and Oracle.

Activation/Go-Live: To keep your project heading for success, we'll put experienced professionals in place to meet the challenges associated with implementing new initiatives. They'll take responsibility for:

- Project management
- Coordinating resources and logistics
- Managing costs/mitigating risk
- Development, coordination, and deployment of training

Revenue Cycle Management: Bring stability and preparation to the financial side of your hospital. We offer process improvement to increase your net

revenue while keeping your provider and patient satisfaction our top priority. Our services include:

- Assessments
- Workflow analysis
- Education and training
- Optimization

Futura maintains a firm grasp on the pulse of healthcare IT and employs a set of guiding principles for our customers:

Vendor Agnostic: With no contractual or financial ties to any hardware or software vendors, we maintain partnerships with leading manufacturers and providers to deliver best-of-breed solutions that match up with your hospital's needs and specifications.

Core Assets: Futura maintains several operations facilities nationwide to ensure timely service for our customers. These technology centers/warehouse facilities serve as a home base for skilled technicians and help desk teams, a workspace for custom configuration, and a launch point for delivery services.

Bundled Services: We have the resources, flexibility, and expertise to package a wide array of clinical and business IT solutions based on your needs to help:

- Identify and procure hardware equipment and devices at the most competitive prices, register deals with manufacturers, and pass on available discounts.
- Manage on-site installation of hardware by service technicians, including setup, integration, network connection, cable management, functional testing, and “white glove” unpacking, packaging removal, and recycling.
- Provide support and maintenance throughout the lifecycle of your technology assets to lower the total cost of ownership.
- Facilitate manufacturer warranty support from our help desk.

Single Source: The simplicity offered by a single point of contact translates to faster decision-making, streamlined project management, and timely project completion. We handle complex sets of responsibilities for your organization, plus our technical specialists can source, install, train, and most importantly, support your clinical and non-clinical devices on site.

“

Healthcare executives must now lead their institutions, designed for methodical and slow change, in a way that reinvents their businesses with the speed of the market.³
